

Caddie Cat

User Guide

Quick club decisions on the course.

Better yardages for every swing length, shot type, and lie.

Real shot tracking that learns your misses over time.

Draft guide with screenshot slots for your real Caddie Cat data

Welcome

Caddie Cat is a golf shot tracking app built to help you pick the right club and swing length on the course, then learn from the shots you actually hit.

Big idea

Most golf apps track club distance. Caddie Cat tracks the shot you intended: club, swing length, shot type, grass, strike quality, direction, and distance.

What Caddie Cat helps you do

- Build a yardage chart for full, 3/4, half, and quarter swings.
- Track Normal, Flop, and Low Trajectory shots separately.
- Record the grass, strike, and direction so misses become visible patterns.
- Ask for a target distance and get fast club/swing recommendations.
- Use GPS or manual entry depending on how you want to track a round.

The screenshot shows the 'Distance' tab in the Caddie Cat app. At the top, there's a status bar with the time 12:45, signal strength, Wi-Fi, and 65% battery. Below the status bar, there's a header with a user icon, the word 'Distance', and a plus icon. The main content area displays three separate yardage charts for different wedges. Each chart has a title, a shot type (Normal or Flop), and a table with four columns: Full, 3/4, Half, and Quarter. The first chart is for a '54° Wedge' with Normal shots. The second chart is for a 'Nick 60° Wedge (Flop)' with Flop shots. The third chart is for a 'Test 52° Wedge' with Normal shots. The data values are as follows:

Wedge	Shot Type	Full	3/4	Half	Quarter
54° Wedge	Normal	104 yds	-	-	-
	Flop	75 yds	-	55 yds	24 yds
Nick 60° Wedge (Flop)	Flop	50 yds	-	35 yds	-
	Normal	108 yds	-	-	-
Test 52° Wedge	Normal	66 yds	-	-	-
	Flop	-	-	-	-

Distance tab showing Normal and Flop yardage rows.

Core Concepts

Profiles

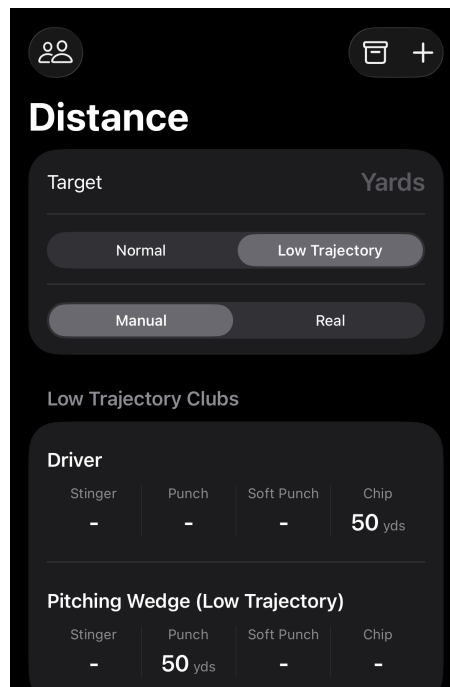

A profile keeps one player's clubs, rounds, shot records, and tracking preferences together. Use profiles if friends want to test the app on the same phone.

Manual vs. Real Distances

- **Manual** distances are the yardages you enter for a club.
- **Real** distances are calculated from saved shots with recorded distance.
- When one mode has no value for a shot, Caddie Cat can show a supplemental value from the other mode in parentheses.

Shot Categories

Category	Use it for
Normal	Standard swings: Full, 3/4, Half, Quarter.
Flop	Wedge-only high/soft shots, also tracked by swing length.
Low Trajectory	Stinger, Punch, Soft Punch, and Chip values.

Low Trajectory filter showing stinger, punch, soft punch, and chip values.

Getting Set Up

Start simple: create a profile, add your active clubs, and enter rough manual yardages. They do not need to be perfect.

- 1 Create or select your player profile.
- 2 Add each club you want active in the Distance tab.
- 3 For wedges, optionally enter loft so the club can display as something like 54° Wedge.
- 4 Enter at least one distance value for the club.
- 5 Choose GPS or Manual as your default shot tracking mode in the Profile tab.

Tip

Manual distances are allowed to be incomplete. If you only know your full-swing number today, enter that and add the partial-swing numbers later.

Screenshot slot: Profile tab

Capture your profile tab showing the shot tracking mode selector and the All Shots / Number of Rounds boxes.

Replace this box with your own screenshot when your real course/profile data is ready.

Screenshot slot: Add or Edit Club

Capture one club form with your real club names, lofts, and swing distances.

Replace this box with your own screenshot when your real course/profile data is ready.

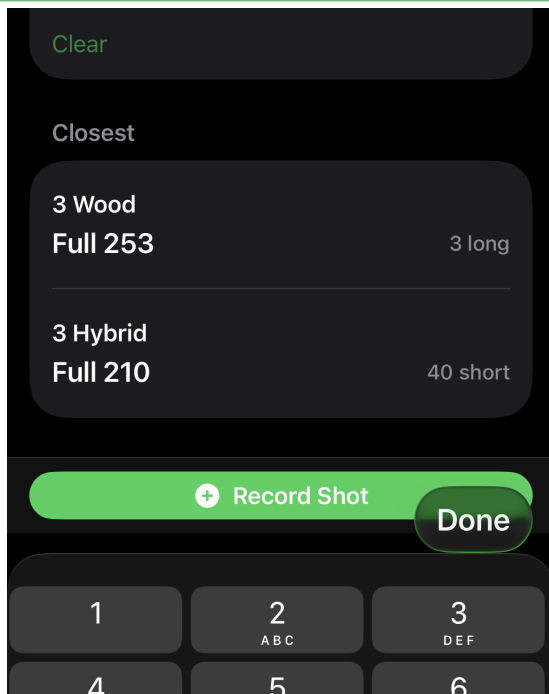

Using the Distance Finder

The Distance tab is the on-course decision screen: enter the yardage you need, pick the shot category/mode, and let Caddie Cat suggest options.

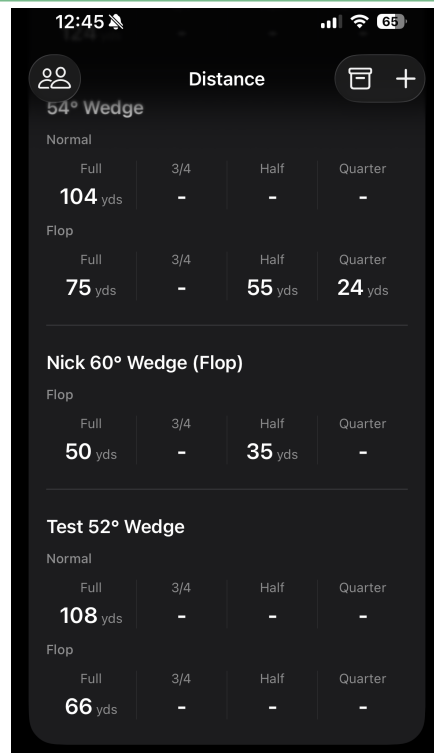

- 1 Open the Distance tab.
- 2 Enter the target distance in yards.
- 3 Choose Normal or Low Trajectory.
- 4 Choose Manual or Real values.
- 5 Review the closest recommendations and pick the shot that matches your lie and confidence.

How matching works

Caddie Cat shows the closest shot slightly over and the closest shot slightly short when possible. Supplemental values can appear only when they are useful enough to beat the main-mode options.

Target-distance results with closest club recommendations.

Distance tab showing Normal and Flop yardage rows.

Starting and Managing a Round

Rounds group shots you track during one outing and make it easier to review course sessions later.

- 1 Open the Round tab.
- 2 Tap Start Round.
- 3 Rename the round if needed.
- 4 Track shots during play.
- 5 Tap End Round when finished, or Abort Round if the session should be discarded.

Round history

Ended rounds appear under Number of Rounds on the Profile tab. Opening a round currently shows total tracked shots, and this area is planned to grow over time.

Screenshot slot: Active Round

Capture the Current Round tab while one of your real rounds is active.

Replace this box with your own screenshot when your real course/profile data is ready.

Screenshot slot: Round History

Capture your list of completed rounds from the Profile tab.

Replace this box with your own screenshot when your real course/profile data is ready.

Tracking a Shot with GPS

GPS mode measures the start and finish points of a shot, then opens the record form with distance filled in.

- 1 Tap Track Shot (Start) before hitting.
- 2 Wait for the two-second anchor capture.
- 3 Walk or ride to the ball.
- 4 Optionally prefill shot details from the app or Lock Screen while moving.
- 5 Tap Track Shot (Finish).
- 6 Review the distance, complete the form, and save.

Confidence colors

OK means estimated uncertainty is 4-7 yards, Bad is 8-10 yards, and Trash is 10+ yards. Green/high-confidence values are within about 3 yards.

Grass Fairway Rough Deep Rough

Record Shot form with GPS distance, confidence, and audit access.

Auditing GPS Distance

Use the audit map when the GPS number looks suspicious or the confidence label is weak.

- 1 Tap Audit from the GPS distance row.
- 2 Review the start and finish points on the satellite map.
- 3 Tap or drag either point to correct it.
- 4 Compare GPS Distance with New Distance.
- 5 Apply the audit to mark the shot as manually verified.

Best practice

Audit shots that matter: new personal bests, strange numbers, low-confidence readings, or shots where you know the phone was not near the ball.

Screenshot slot: Audit map

Capture the audit map from your phone with a real shot path and both pins visible.

Replace this box with your own screenshot when your real course/profile data is ready.

Manual Shot Entry

Manual mode skips GPS and lets you record the shot details directly. Distance is optional.

- Use manual mode at the range, indoors, or when GPS is not reliable.
- Leaving distance blank still records the shot for strike/direction trends.
- Shots without distance do not count toward real distance averages.
- You can edit or delete shot records later.

Screenshot slot: Manual Record Shot

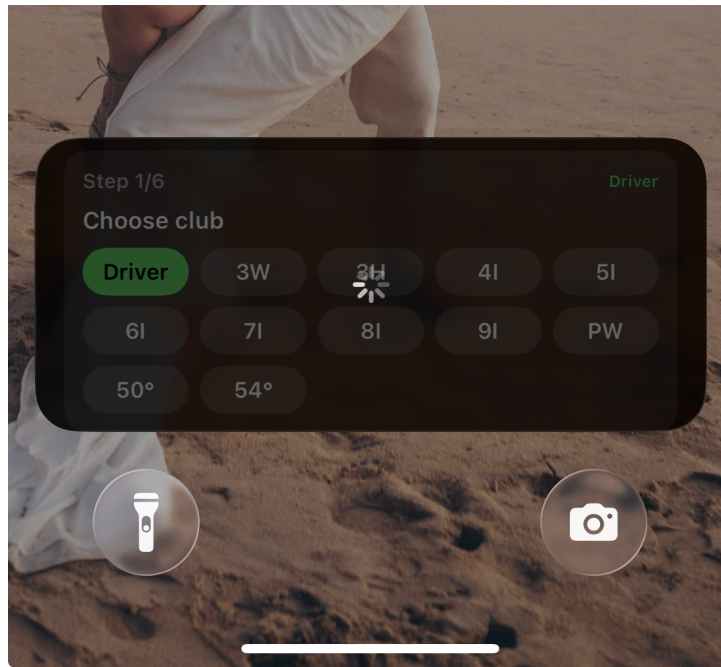

Capture the Record Shot form with your real clubs and a blank or manually entered distance.

Replace this box with your own screenshot when your real course/profile data is ready.

Lock Screen and Dynamic Island

During an active round, Caddie Cat gives quick access from the Lock Screen and Dynamic Island.

- Start tracking quickly without hunting for the app.
- Use the Lock Screen wizard to prefill club, shot type, grass, strike, and direction while walking.
- Open the app from the activity when it is time to finish the shot.
- Draft values from the Lock Screen and in-app form stay coordinated.

Lock Screen Live Activity draft card for shot details.

Screenshot slot: Dynamic Island

Capture the Dynamic Island while a round is active and/or a GPS shot is in progress.

Replace this box with your own screenshot when your real course/profile data is ready.

Reviewing Your Stats

The Analysis tab turns tracked shots into feedback: how far shots are going and where misses are showing up.

- Open Analysis to see clubs with recorded-shot counts.
- Open a club to compare manual and real distance rows.
- Tap Total Shots to see every recorded shot for that club.
- Review strike and direction charts to spot common misses.

Direction analysis showing common shot-shape tendencies.

Screenshot slot: Club Analysis

Capture a club analysis page with your real shot totals and distance rows.

Replace this box with your own screenshot when your real course/profile data is ready.

Editing and Cleaning Up Data

- Edit a club from the Distance tab when manual yardages change.
- Use inactive clubs for clubs that are out of the bag but should not be deleted.
- Open shot lists from Analysis or Profile to edit or delete individual shots.
- Delete profiles or rounds when testing data is no longer useful.

Data hygiene

Early tracking can be messy. Keep the shots that teach you something; clean out obvious mistakes so real averages stay useful.

Screenshot slot: Recorded Shots list

Capture a shot list with multiple shots from your real profile.

Replace this box with your own screenshot when your real course/profile data is ready.

Tips for Best Results

- Seed the app with rough manual yardages before the first round.
- Track normal shots consistently before worrying about every specialty shot.
- Record grass, strike, and direction honestly. The analysis is only as good as the inputs.
- Audit GPS when the number feels wrong instead of saving a bad distance.
- Use Real mode after enough shots exist; use Manual mode when you need your known baseline.

Troubleshooting

Issue	What to try
GPS looks wrong	Audit the map, check confidence, or enter distance manually.
No Lock Screen card	Start a round first and make sure Live Activities are allowed.
Unexpected recommendations	Check Normal vs Low Trajectory and Manual vs Real mode.
Averages look off	Delete bad shots or shots recorded under the wrong club/type.

Privacy and Data

- Caddie Cat stores app data locally on the device.
- Location is used to measure shot distance during GPS tracking.
- Profiles, rounds, clubs, and shots can be deleted from inside the app.
- No account is required in the current design.

Screenshot Checklist for Final Guide

- Profile tab with your name and shot tracking mode.
- Distance tab with your real bag and target recommendations.
- Current Round active state.
- GPS Record Shot form showing a good real-course distance.
- Audit map with a meaningful course shot.
- Lock Screen card and Dynamic Island during a round.
- Analysis tab and a club detail page with several recorded shots.
- Recorded Shots list for a club.

Next iteration

Once you send or save your own screenshots, I can replace the placeholders and produce a final clean PDF with no draft boxes.
